PROFESSIONAL SUMMARY

Final-year B.E. Computer Science Engineering student with an Honours Degree in Artificial Intelligence and Machine Learning. Builds practical data, FinTech and AI/ML systems using Python and SQL, with experience in financial data analysis, backtesting, APIs, web applications and deployment. Strong interest in Data Engineering, Financial Data, FinTech and quantitative research; seeking entry-level roles where analytical thinking and engineering fundamentals can be applied to real products.

EDUCATION

B.E. Computer Science Engineering - Honours in Artificial Intelligence & Machine Learning

Sengunthar Engineering College, Thiruchengode | 2023 - 2027 | **CGPA: 7.7/10**

SELECTED PROJECTS

MarketDX - Market Diagnosis Explorer

End-of-day market intelligence system for diagnosing Indian market conditions through structured market data, screening, dashboards and AI-assisted interpretation. [Live](#) | [GitHub](#)

React/Vite, FastAPI, PostgreSQL, Redis, Docker

TradO - AI Trading Analysis Platform

AI-oriented trading analysis and backtesting platform for Indian markets using market data, technical indicators and strategy research. [GitHub](#)

Python, Backtesting, Technical Indicators

Tender Intelligence System

Government and private tender intelligence application focused on tender retrieval, filtering, analysis and decision support. [GitHub](#)

JavaScript, Web Scraping, OCR, AI Analysis

Trading Dataset Generator

Python-based pipeline for generating structured trading datasets for model training and experimentation, including JSON-oriented outputs and automated data connections. [GitHub](#)

Python, JSONL, Market Data, LLM Training Data

INTERNSHIP EXPERIENCE

Machine Learning Intern - NxtGen Instruments | Offline internship

Supported dataset preparation, basic model training exposure and API integration activities for practical AI applications.

Data Management Intern - Steel Industry

Worked with structured business data and data-management activities in an industrial environment.

TECHNICAL SKILLS

Programming: Python, SQL | **Data:** Pandas, NumPy, Scikit-learn, Matplotlib | **Backend:** FastAPI, Flask, REST APIs, PostgreSQL, Redis | **Analytics:** Power BI, Excel, Plotly, EDA, Time Series | **FinTech:** Algorithmic Trading, Backtesting, Technical Indicators, Financial Data | **Engineering:** Git, GitHub, GitLab, Linux, Docker | **Concepts:** Feature Engineering, Model Evaluation, Data Cleaning

ACHIEVEMENTS & ACTIVITIES

- Secured 1st Place in Idea Quest competition for an AI/ML-based solution.
- Smart India Hackathon internal selections across two years; participated in hackathon activities.
- Contributed to college and inter-college technical-event organization.
- Industry exposure through NxtLogic visit; continued independent FinTech and quantitative research projects.

CERTIFICATIONS & EXPOSURE

Prompt Engineering | NPTEL - IoT | Idea Presentation | NxtLogic (AI Visit) | Multi-model / AI tool exposure
